DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10-28-02 (Paper No. 28) has been entered.

In view of Applicant's amendment and Remarks, the 102 rejection has been withdrawn.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

MAINTAINED Claims 2-6, 27-32 and 35-37 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Applicant traverses the rejection on the grounds that the search report cited in the Action lists only four consecutive amino acids of SEQ ID NO:1 (ie ISYS) present in naturally occurring claudin as recited in claim 2, not 5. However, it is noted by the examiner that said search report was done with 5 consecutive amino acids being IYSYX. It is noted that the identities of X in naturally occurring claudins, known and unknown, are not limited to any specific amino acids. Applicant asserts that this search is insufficient for doubting the objective truth of the specification regarding the cell modulating agents which encompasses seven or eight consecutive amino acids of SEQ ID NO:1. However based on the limited working examples in the specification, and the insufficient disclosure regarding the identity of the generic amino acids present in naturally occurring claudin, it would require undue experimentation for one of skill to predict which of the innumerable sequences encompassed by the instant claims would function as a cell adhesion modulating agent, without further guidance and direction from the specification. The scope of the claims must bear a reasonable correlation with the scope of enablement. See In re Fisher, 166 USPQ 19 24 (CCPA 1970).

Therefore, though applicant's arguments have been carefully considered, they are not deemed persuasive, and the rejection is maintained, essentially for the reasons of record.

No Claim is allowed.
